Preface

The focus of the present study is a comparison of English and Czech intonation. Intonation studies in the two languages are based on different approaches to prosodic systems and different traditions in prosodic transcription. This book, presenting a corpus-based analysis of English and Czech, draws on the traditions of both languages with a certain preference for English prosodic transcription systems. A simplified version of one of the English systems has been applied for the analysis of both English and Czech texts.

The work is a modified version of the author's doctoral dissertation. The scope of the study is limited by the possibilities and abilities of one author working without recourse to a team of trained phoneticians and computer experts; therefore, it undoubtedly leaves open many questions concerning the correlation between English and Czech intonation. Perhaps the study can provide the basis for a more comprehensive future comparison of the two, and possibly additional, languages.

Acknowledgements

I owe a debt of gratitude especially to Jan Firbas, who supervised my research for a number of years and who devoted innumerable hours of his precious time to discussions of the topics dealt with in my doctoral dissertation – the basis of this book. I am also deeply grateful to Jan Svartvik, who advised me on the conception of the dissertation during my stay at Lund University. Last but not least, I would like to thank Libuše Dušková and Aleš Svoboda, who reviewed the dissertation and made a number of valuable comments and suggestions, and Matthew Nicholls, who carried out a most careful language revision of the text of this book.

1 Intonation and prosodic systems

Intonation, the occurrence of various tunes or melodies in utterances, is the result of the operation of a set of prosodic systems. Each language has a specific intonation system, and in a particular communicative situation, speakers of different languages may apply different tunes. The discussion of English intonation presented in section 1.1 is based on the traditional British ‘contour’ analysis, especially the conceptions presented by Crystal (1969), O’Connor and Arnold (1973), and Cruttenden (1986), who summarize and further develop some of the earlier intonation systems. The discussion of Czech intonation in section 1.2 draws mainly on Palková (1994), Daneš (1957) and two grammars of Czech: *Mluvnice češtiny 1* [A grammar of the Czech language] (Petr et al. 1986) and *Příruční mluvnice češtiny* [A handbook of Czech grammar 1] (Karlík et al. 1995). Section 1.3 deals with the correlation between the intonation systems of the two languages.

1.1 The intonation system of English

Crystal (1969: 5, 140, 195) views intonation as a complex of features from different prosodic systems; prosodic systems are defined as “non-segmental characteristics of speech referable to variations in pitch, loudness, duration and silence, other vocal effects being irrelevant to their identification”. Crystal lists the following prosodic systems: pitch direction (or tone), pitch range, pause, loudness, tempo, rhythmicality, and tension. Relevance of the prosodic systems listed above for the description of intonation decreases from the first to the last; the discussion of intonation in this survey will focus on the most relevant prosodic systems, i.e. pitch direction and pitch range, while other prosodic systems will receive less attention. Pause will be discussed in connection with speech segmentation (tone-unit identification); rhythmicality will be mentioned in connection with rhythm groups in Czech; loudness and tempo will not be described in detail, although their effects have been taken into consideration in the actual prosodic analysis of texts (for example the effect of tempo on the segmentation of utterances into tone units).

1.1.1 Identification of the tone unit

Connected speech is divided by means of intonation into tone units which are perceived by the listener as relatively complete. Crystal (1969: 204) defines a tone unit as “the most readily perceivable, recurrent, maximal functional unit to which linguistic meanings can be attached”. Tone units may correspond to clauses, but very often to smaller grammatical units, e.g. noun or adverbial phrases; a tone unit may consist of a single word. Different authors refer to tone units by different names. The expression tone-unit is used by Crystal;¹ Cruttenden uses the term intonation-groups; O’Connor and Arnold speak about tone groups and word groups, while other authors use the expressions sense-groups, breath-groups, phonological phrases, phonological clauses,

1 The same term (spelled without a hyphen, i.e. ‘tone unit’) is applied in Svartvik and Quirk 1979 and Svartvik 1990.
